

## Abstract

A machine controlled by a computer for depositing a liquefied electronically-interactive material on a sheet or support card, ~~which~~ includes: a base (1) to support ~~a~~ the mobile bed (2) which is moved longitudinally (Y) by ~~means of~~ a worm screw (20) whose movement is controlled by a computer; and ~~which supports for the support and fixes~~ fixing of the said support sheet or card "S" on which the layer of electronically-interactive material is to be formed; ~~a~~ A bridge above the said base ~~has with~~ a transversal shaft (30) which also has a worm screw and whose movement is also controlled by the ~~said computer, in which the~~ The transversal shaft (30) moves the ~~said~~ distribution unit for the electronically-interactive material to be deposited (3) in an orthogonal direction (X).
